

## Optimize Efficiency with Centralized Risk and Safety Technology

With drivers dispersed across countless miles of road, improving team member safety and employee retention — while reducing the cost of potential claims from incidents and crashes — can only come from a comprehensive view of your risk and safety program data.

With Origami Risk, you can manage and track everything from driver safety and regulatory compliance to insurance claims and third-party risks.

## Risk Management Information System (RMIS)

Collect incident data in real-time, enhance communications with insurers, and **reduce administrative burdens** allowing you to **focus on mitigating risks, reducing claims costs, and negotiating better premiums.**

- **Track, analyze, and report on loss-related costs, risk transfer costs, claims costs, and any other program costs** that would impact your Total Cost of Risk (TCOR).
- Make well-informed decisions with **centralized risk and safety data** from various technologies across your network, including **dashcams, telematics technology, and weather and traffic alert systems.**
- Adapt to novel risks, such as **severe weather**, through **automated workflows that ensure nothing is missed** when unexpected events occur.

## Environment, Health & Safety (EHS)

Empower **quick and easy reporting** to ensure your drivers are **safe on the road** and in **compliance with laws and regulations.**

- **Integrate dashcams and telematics data with robust analytics** that enable you to tie **leading indicators to incidents by driver and location.**
- **Enable mobile and portal reporting** allowing drivers to **report incidents in real-time**, ensuring **collection of all key data from accident scenes.**
- **Ensure compliance with federal and state regulatory agencies**, leveraging features such as our **driver qualification files (DQF) solution.**

## Governance, Risk & Compliance (GRC)

Maintain compliance with governance processes while providing greater visibility into safety and operational risks across your fleet and facilities.

- Demonstrate positive company culture, organizational stability, and integrity to enhance employee satisfaction and improve retention.
- Centralize your new vendor implementation processes to evaluate the impact of new tools.
- Identify, assess, and respond to supply chain disruptions, cyber risks, new regulations, or changing weather.

## Integrated Risk Management (IRM)

Adapt to evolving risks by promoting cross-departmental collaboration and centralizing your data in a single source of truth with our comprehensive IRM solution.

- Minimize incidents with preventative safety programs, reducing crash-related injuries and keeping more drivers on the road.
- Consolidate and analyze risk and safety data from multiple terminals and business units in a single system.
- Mitigate costly general liability and workers' compensation claims with visibility and oversight into evolving risks and hazards.

“With Origami Risk, our data came to life. We’re able to see, interpret, analyze, and act upon safety concerns like never before.”

Jeff Brown
